# SycoVac mono

## For the Sake of Health

Your Precision and Drives Specialist™

# Healthy Working

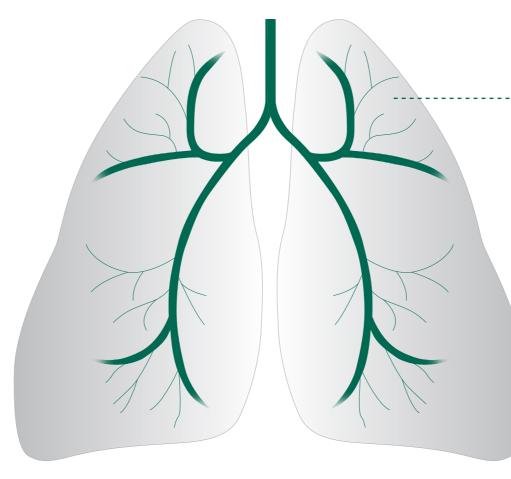

## through the best Technology

### SycoVac offers optimal health protection due to

- → its highly efficient multi-filter system, which collects 99.995 percent of fine dust particles ("plus" series)
- → the automatic suction power setting ("plus" series)
- → its low noise level

### SycoVac is technically superior because

- > it possesses the dust safety approval in accordance with GS-ITA-M20 ("plus" series")
- > it saves energy thanks to its automatic switch-on function
- > the filters are easy to change
- > its modular design enables quick and uncomplicated maintenance

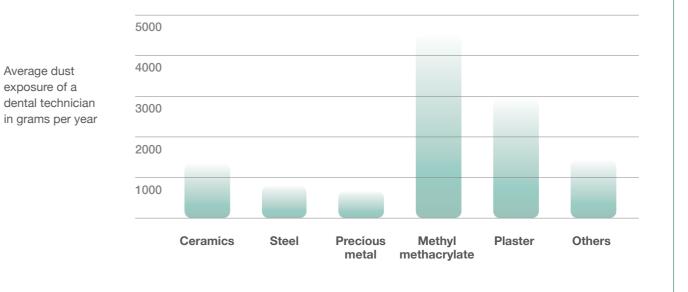

Average dust exposure of a Fine dust particles are dangerous: Particles that are smaller than 5 µm are particularly hazardous to the human lung.

and disposes of them.

using its filters.

systems:

"We're very happy with SycoVac: it eliminates even the finest dust particles. Its power is enormous while at the same time guaranteeing a high degree of economy and comfort." The fine dust filter of our SycoVac extraction systems collects these particles

#### Much healthier working

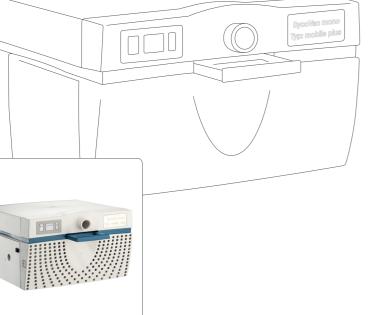

Dental technicians work in polluted environments. On average, they are exposed to an annual dose of 12 kilograms of fine dust particles. A third of these are highly toxic plastic dusts. This can be prevented thanks to a new generation of laboratory extraction

# Flexible Technology

## Fixed Installations or Mobile Operation

## SycoVac mono mobile

### **Mobile Solution**

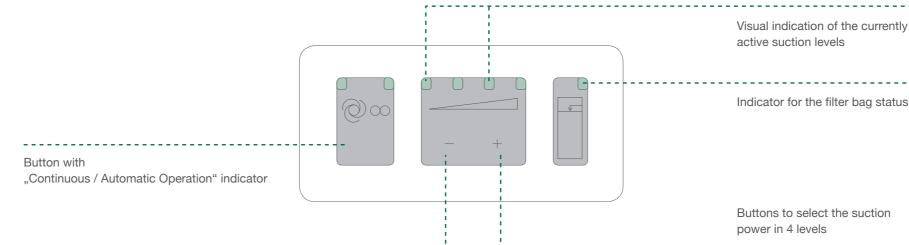

Full power at any place inside the laboratory - usable wherever it is currently needed. Our SycoVac mono mobile is compact, easy to move and transport and can be flexibly positioned. It guarantees clean air to the benefit of the entire laboratory team for certain functional areas where space is limited or as a buffer for surges in demand.

## SycoVac mono

#### **Integrated Comfort**

Permanently installed in existing worktables and protected from damage: SycoVac mono impresses thanks to its unique "drawer" concept.

It offers a high degree of comfort, convenience and healthy ergonomics to laboratory employees in addition to its outstanding filtering and suction performance.

"We had initially decided to go for just a mobile solution. But after our employees almost started fighting for the device, we opted to install fixed systems into all our worktables"

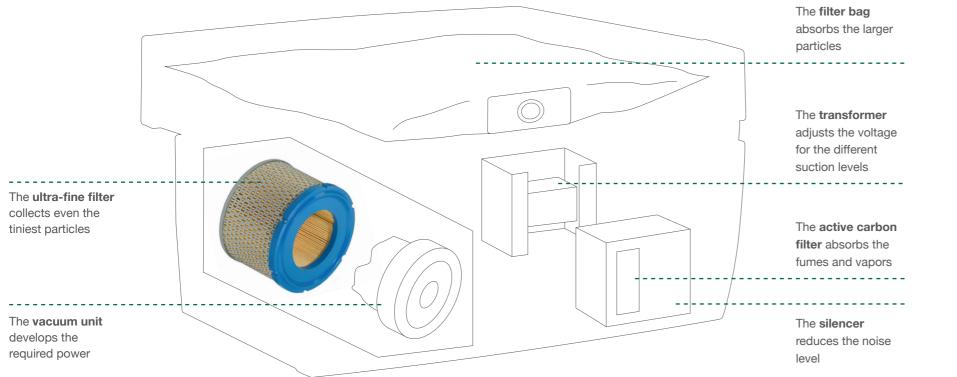

SycoVac

# Added Benefits in Terms of Health and Efficiency

# SycoVac mono plus SycoVac mono mobile plus

Our "plus" series models are equipped with fine dust filters (ultra-fine filters) as standard and feature an automatic power setting function including an automatic switch-off function and an automatic "high power" mode. The patented sensor measures the volumetric flow. If the filter fills up and the suction capacity starts to drop, the next suction level is automatically actuated or the system is stopped if the filter is full. The suction capacity is always within the optimal operating range. The service life of the filter bags is increased and the energy consumption is reduced in comparison to centrally installed extraction systems.

"The SycoVac Plus Series Models have proven to be the perfect solution for our laboratory: more power, less energy consumption, higher efficiency and nearly 100 percent less dust – this pleases both the boss and his employees!"
